                                                                                         σ
                                                                                                                  σ
                                                                                                                                                                                                                                                                                                                                                                          FUNCTION: INVOLVED IN THE BIOSYNTHESIS OF AMYLOVORAN WHICH FUNCTIONS AS A UTRULENCE FACTOR. MAY FUNCTION AS A GIXCOSYI TRANSFERASE WHICH TRANSFERS GALACTOSE FROM UDD-GALACTOSE TO LIPID-LINKED AMYLOVORAN-SUBUNIT PRECURSOR.

PATHWAY: Exopolysaccharide biosynthesis.
SIMILARITY: BELONGS TO THE GLYCOSYLTRANSFERASE FAMILY 2.

Proc. Natl. Acad. Sci. U.S.A. 98:989-9894(2001).

-I- FUNCTION: GLYCOSYLTRANSFERASE REQUIRED FOR THE SYNTHESIS OF SUCCINOGLYCAN (EPS 1). NEEDED FOR THE ADDITION OF THE FIFTH SUGAR (GLUCOSE), CATALYZES THE FORMATION OF A BETA-1,6 LINRAGE BETWEEN THE FOURTH AND FIFTH SUGAR.

-I- PAYHWAY: Exopolysaccharide biosynthesis.

-I- SUBCELLULAR LOCATION: Cytoplasmic.

-I- SUBCELLULAR LOCATION: Cytoplasmic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  "Identification and analysis of the Rhizobium meliloti exoalinvolved in exopolysaccharide biosynthesis and mapping of plocated on the exoHKLAMONP fragment.";
Mol. Gen. Genet. 241:367-379(1993).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC The present sequence represents a protein encoded by open reading frame CC (ORF) F of a novel polynucleotide sequence designated "GS". GS is a CC pathogenecity island of 8 kb of DNA comprising a core region of 5.75 kb cC with multiple ORFs and an adjacent transmissable element of 2.5 kb. The CC ORFs, and also the transmissable element, encode proteins which may be CI linked to pathogenecity, such as providing receptors for ceilular CC recognition. GS was discovered and characterised using differential DNA CC analysis technology. It is found within Mycobacterium paratuberculosis CC and it has also been identified in Mycobacterium avium subspecies cilvaticum. These pathogenic mycobacteria cause chronic inflammation of the intestine and Crohn's disease in humans. The protein products of the CRFs of GS can be used for detecting mycobacteria or for diagnosing, treating or preventing mycobacterial disease. In particular they can be used as vaccines for inflammatory disease such as Crohn's disease or CK sarcoidosis in humans or Johne's disease in animals.

The present sequence represents a protein encoded by open reading frame (ORF) F of a novel polynucleotide sequence designated "GS". GS is a pathogenecity island of 8 kb of DNA comprising a core region of 5.75 kb with multiple ORFs and an adjacent transmissable element of 2.5 kb. The CORFs, and also the transmissable element, encode proteins which may be linked to pathogenecity. Such as providing receptors for cellular recognition. GS was discovered and characterised using differential DNA analysis technology. It is found within Mycobacterium paratuberculosis and it has also been identified in Mycobacterium avium subspecies and the intestine and Crohn's disease in humans. The protein products of the intestine and Crohn's disease in humans. The protein products of the intestine and Crohn's disease in particular they can be used for detecting mycobacteria or for diagnosing, treating or preventing mycobacterial disease. In particular they can be used as vaccines for inflammatory diseases such as Crohn's disease or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                analysis technology. It is found within Mycobacterium paratuberculosis and it has also been identified in Mycobacterium avium subspecies silvaticum. These pathogenic mycobacteria cause chronic inflammation of the intestine and Crohn's disease in humans. The protein products of the ORFs of GS can be used for detecting mycobacteria or for diagnosing, treating or preventing mycobacterial disease. In particular they can be used so received as a crohn's disease or because of the contract of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents the protein encoded by open reading frame (ORF) F, from M. tuberculosis. This ORF F has been found to have homoogy with ORF F of a novel polynucleotide sequence designated "GS" GS is a pathogenecity island of 8 kb of DNA comprising a core region of 5.75 kb with multiple ORFs and an adjacent transmissable element of 2.5 kb. The ORFs, and also the transmissable element of element of 2.5 kb. The linked to pathogenecity, such as providing receptors for cellular recognition. GS was discovered and characterised using differential DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated pathogenicity island from mycobacteria - used to develop products for detection, diagnosis, prevention and tre of mycobacteria infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Doran T,

The protein shows low homology with Lsi2 of Netsseria gonorrhoeae, and is predicted to be a colitose or glucose transferase. The use of nucleic acid molecules derived from particular assembly and transport genes, particularly wbd (transferase), wzx (flippase) and wzy (polymerase) genes, within O antigen gene clusters improves the specificity of methods for the detection and identification of O antigens, e.g. in testing food- or faecal-derived samples, or samples from patients. The O antigen is a major virulence factor of enteropathogenic E. coli strains that cause diarrhoea and haemorrhagic colitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       O antigen; Olll antigen; wbdL gene; colitose transferase; glucose transferase; diarrhoea; haemorrhagic colitis; diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .

                                                                                                                                                                                                                                                                                                                                                The present invention relates to the genomic sequence of pyrococcus abyssi (see AAF86431 and AAH41233-7) and P. abyssi proteins. P. abyssi a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is one such P. abyssi protein. The proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up 110 degrees centigrade.

Note: This patent is in the same patent family as WO200065062, which contains additional sequences as shown in AAB99132-AAB99143, AAH75903-AAH75920 and AAG66436.

The present sequence represents the protein encoded by open reading frame CC (ORF) B, from M. tuberculosis. This ORF B has been found to have homogy CC with ORF B of a novel polynucleotide sequence designated "CS". GS is a cc pathogenecity island of 8 kb of DNA comprising a core region of 5.75 kb with multiple ORFs and an adjacent transmissable element of 2.5 kb. The CC With multiple ORFs and an adjacent transmissable element, encode proteins which may be clinked to pathogenecity, such as providing receptors for cellular cc recognition. GS was discovered and characterised using differential DNA CC analysis technology. It is found within Mycobacterium paratuberculosis cr and it has also been identified in Mycobacterium avium subspecies cs conditation. These pathogenic mycobacteria cause chronic inflammation of the intestine and Crohm's disease in humans. The protein products of the ORPs of GS can be used for detecting mycobacteria or for diagnosing, creating or preventing mycobacterial disease. In particular they can be used as vaccines for inflammatory diseases such as Crohm's disease or cycles as croidosis in humans or Johne's disease in animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Doran T,

                                                                                                                                                                                                                                                                                                                                                                                                                                        CC The invention relates to a protein (ABP25413-ABP30895) from group B CC streptococcus/BBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in CC the specification. The proteins have antibacterial and antinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by CC Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. CC Nucleic acids encoding (I) are used to detect Streptococcus in a CC biological sample. (I) is used to detect Streptococcus in a CC (I). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ABP26805

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This is the amino acid sequence of a sugar transferase that is encoded by the wbd0 open reading frame of a gene cluster (see AAX06749) involved in the blosynthesis of the Escherichia coil 0157 0 antigen. The use of nucleic acid molecules derived from particular assembly and transport genes, particularly wbd (transferase), wzx (flippase) and wzy (polymerase) genes, within 0 antigen gene clusters improves the specificity of methods for the detection and identification of 0 antigens, e.g. in testing foodor faecal-derived samples, or samples from patients. The 0 antigen or faecal-derived samples from patients. The 0 antigen or samples from patients. The 0 antigen or samples from patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0 antigen;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
                                                                                                                                                                                                                                                                                                                                                                                     AAY54065-74 represent enzymes involved in the biosynthesis of exopolysaccharides (EPS). These enzymes are designated EPS1-EPS10. and are encoded by open reading frames eps1-eps10. The enzymes are isolated from Streptococcus thermophilus strain Sfi39. The proteins are used in a method for the synthesis of EPS, which includes at least one step of forming a bond (alpha or beta-isomer) between C-1 (carrying the reducing aldehyde function, of an activated D-galactose pyranose), and the content of the synthesis of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        22-APR-1998;
22-APR-1998;
.22-APR-1998;
                                            a phosphate on a lipophilic or proteinaceous primer. Stepwise synthesis of EPS occurs with, in each step, addition of a new sugar unit, through its hemi-acetyl function, to an alcoholic hydroxyl of a second sugar unit, present at the end of a chain of sugar residues bonded to the primer. EPS1 to EPS4 are used to elongate the EPS chain, and to regulate EPS production, EPS5 creates new bonds between saccharides, EPS6 is used in the blosynthesis of EPS, EPS7 and EPS8 are beta-glycoxyltransferases, EPS9 is a transporter of repetitive units, and EPS10 catalyses the conversion of a pyranose form of a beta-D-galactose to the furanose form. The EPS enzyme are used to improve properties of foods, particularly fermented milk products such as yoghurt and cheese, e.g. their organoleptic properties and flavour stability.

Streptococcus thermophilus Sfi39. The operon contains 10 open reading frames, and encodes enzymes (eps1, eps2, eps3, eps4, eps5, eps6, eps7, eps8, eps9 and eps10) that are involved in the biosynthesis of exopolysaccharides (EPS). The enzymes catalyse the formation of specific intersugar bonds. The enzymes catalyse a process that includes at least one step of forming a bond (in alpha or beta anomeric form) between C1, carrying the reducing aldehyde group of an activated D-Galp (galactose in pyranose form), and a phosphate group on a lipophilic or proteinaceous primer. The enzymes are used to produce EPS that have antitumor or probiotic properties or are used in foodstuffs to improve organoleptic qualities and flavour. When expressed by lactic accidence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               22-APR-1998;

The present sequence represents a protein encoded by open reading frame (ORF) B of a novel polynucleotide sequence designated "GS". GS is a pathogenecity island of 8 kb of DNA comprising a core region of 5.75 kb with multiple ORFs and an adjacent transmissable element of 2.5 kb. The ORFs, and also the transmissable element, encode proteins which may be linked to pathogenecity, such as providing receptors for cellular recognition. GS was discovered and characterised using differential DNA analysis technology. It is found within Mycobacterium paratuberculosis and it has also been identified in Mycobacterium avium subspecies

The protein products of ORFs of GS can be used for detecting mycobacteria or for diagnosing, treating or preventing mycobacterial disease. In particular they can used as vaccines for inflammatory diseases such as Crohn's disease or sarcoidosis in humans or Johne's disease in animals.

The EPS plasmid is about 32 kb in size and encodes at least 13 active genes. The enzymes encoded by these genes allow the bacteria to produce an exopolysaccharide, designated EPS352. When EPS352 is expressed in or added to milk, it imparts highly desirable sensory characteristics to the milk, including making the milk very thick, with a very smooth mouth-feel, and slightly sweet with an obvious chewable-bite. Open reading frames (ORF's) M and N show homology to glycosyltransferase involved in EPS352 is biosynthesis. L. lactis cremoris Ropy352 is deposited with the USDA-ARS-NCAUR-NRRL as deposit accession number NRRL B-30229. EPS352 is useful for thickening a liquid selected from milk, a milk-based liquid, a whey-based liquid, a soy-based liquid, a fruit-juice. It is also useful as an additive in pharmaceutical

                                                                                                                                                                  Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds t (I). A composition comprising (I) or a nucleic acid encoding (I), may used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated me meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                          streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by

AAY68976;

AAY68976 standard;

Protein;

278

Cps1K

protein

which

has glycosyltransferase activity.

Capsular gene cluster; serotype 1; polysaccharide biosynthesis; capsular component; antigen; regulation; chain length determina complement-mediated opsonophagocytosis; serotype-specific detec

determination; lfic detection;

The in polysaccharide biosynthesis of capsular components and antigens. The proteins are involved in regulation (CpsA), chain length determination (CpsB, CpsC), export (CpsC), and biosynthesis (CpsE, CpsF, CpsG, CpsH, CpsJ, CpsK). The capsula confers bacterium resistance to complement-mediated opsonophagocytosis. The gene cluster is used as a source of probes and primers for serotype-specific detection of S. suis and is also useful for recombinant production of the proteins of the proteins are then useful for producing antigens that can be used in vaccines, for controlling or eradicating a Streptococcal disease, in humans or animals, e.g. against S. suis in pigs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           capsular component; antigen; regulation; chain length determination; complement-mediated opsonophagocytosis; serotype-specific detection; antigen; vaccine; Streptococcal disease; ORF 2Z; ORF 2Z; ORF 2Z; Cps2B; Cp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The proteins AAY68950-69 are encoded by the capsular gene cluster of Streptococcus suis serotype 2. The genes in this cluster are involved
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid containing the capsular gene cluster of Streptococcus suis, used for serotype-specific detection and to generate antigens or mutants for vaccination -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 2000-195104/17.
